

## BGP Attributes and Policy Control

ISP/IXP Workshops

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

1

## Agenda

Cisco.com

- BGP Attributes
- BGP Path Selection
- Applying Policy

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

2

## BGP Attributes

The “tools” available for the job

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

3

## What Is an Attribute?

Cisco.com

...	Next Hop	AS Path	MED	...	...
-----	----------	---------	-----	-----	-----

- Describes the characteristics of prefix
- Transitive or non-transitive
- Some are mandatory

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

4

## AS-Path

Cisco.com

- Sequence of ASes a route has traversed
- Loop detection
- Apply policy

AS 300  
AS 400  
AS 500  
AS 100  
AS 200

180.10.0.0/16 300 200 100  
170.10.0.0/16 300 200  
150.10.0.0/16 300 400

180.10.0.0/16 300 200 100  
170.10.0.0/16 300 200  
140.10.0.0/16 300

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

5

## AS-Path loop detection

Cisco.com

AS 300  
AS 400  
AS 500  
AS 100  
AS 200

180.10.0.0/16 300 200 100  
170.10.0.0/16 300 200  
150.10.0.0/16 300 400

180.10.0.0/16 300 200 100  
170.10.0.0/16 300 200  
140.10.0.0/16 300

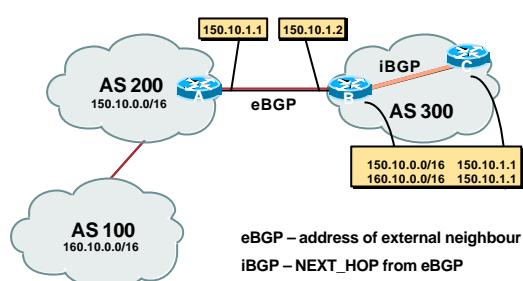

140.10.0.0/16 500 300  
170.10.0.0/16 500 300 200

180.10.0.0/16 is not accepted by AS100 the network has AS100 in the AS-PATH – this is loop detection in action

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

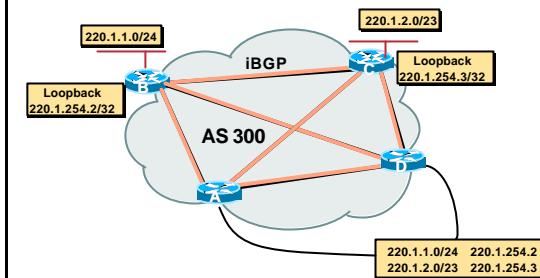

6

## Next Hop

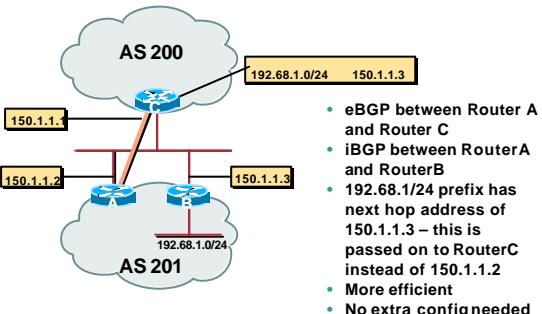

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

## iBGP Next Hop

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

## Third Party Next Hop

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

## Next Hop (summary)

- IGP should carry route to next hops
- Recursive route look-up
- Unlinks BGP from actual physical topology
- Allows IGP to make intelligent forwarding decision

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

## Origin

- Conveys the origin of the prefix
- “Historical” attribute
- Influences best path selection
- Three values: IGP, EGP, incomplete
  - IGP – generated by BGP network statement
  - EGP – generated by EGP
  - incomplete – redistributed from another routing protocol

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

11

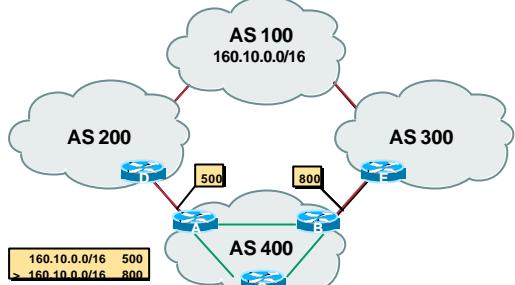

## Aggregator

- Useful for debugging purposes
- Conveys the IP address of the router/BGP speaker generating the aggregate route
- Does not influence path selection

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

12

## Local Preference

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

13

## Local Preference

- Local to an AS – non-transitive

local preference set to 100 when heard from neighbouring AS

- Used to influence BGP path selection

determines best path for **outbound** traffic

- Path with highest local preference wins

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

14

## Local Preference

- Configuration of Router B:

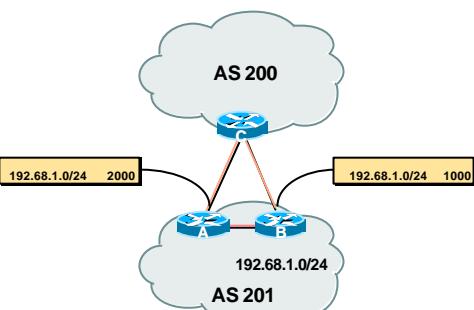

```
router bgp 400
neighbor 220.5.1.1 remote-as 300
neighbor 220.5.1.1 route-map local-pref in
!
route-map local-pref permit 10
match ip address prefix-list MATCH
set local-preference 800
!
ip prefix-list MATCH permit 160.10.0.0/16
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

15

## Multi-Exit Discriminator (MED)

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

16

## Multi-Exit Discriminator

- Inter-AS – non-transitive
  - metric attribute not announced to next AS
- Used to convey the relative preference of entry points
  - determines best path for **inbound** traffic
- Comparable if paths are from same AS
- IGP metric can be conveyed as MED
  - set metric-type internal in route-map

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

17

## MED & IGP Metric

- set metric-type internal

enable BGP to advertise a MED which corresponds to the IGP metric values

changes are monitored (and re-advertised if needed) every 600s

**bgp dynamic-med-interval <secs>**

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

18

## Multi-Exit Discriminator

- Configuration of Router B:

```
router bgp 400
neighbor 220.5.1.1 remote-as 200
neighbor 220.5.1.1 route-map set-med out
!
route-map set-med permit 10
match ip address prefix-list MATCH
set metric 1000
!
ip prefix-list MATCH permit 192.68.1.0/24
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

19

## Weight

- Not really an attribute – local to router

- Highest weight wins

- Applied to all routes from a neighbour

```
neighbor 220.5.7.1 weight 100
```

- Weight assigned to routes based on filter

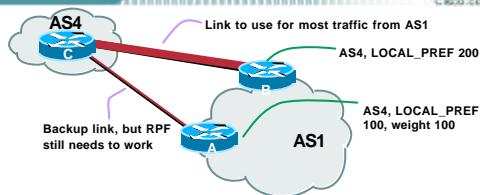

```
neighbor 220.5.7.3 filter-list 3 weight 50
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

20

## Weight – Used to help Deploy RPF

- Best path to AS4 from AS1 is always via B due to local-pref
- But packets arriving at A from AS4 over the direct C to A link will pass the RPF check as that path has a priority due to the weight being set

If weight was not set, best path back to AS4 would be via B, and the RPF check would fail

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

21

## Community

- Communities described in RFC1997

- 32 bit integer

Commonly represented as two 16bit integers (RFC1998)

- Used to group destinations

Each destination could be member of multiple communities

- Community attribute carried across AS's

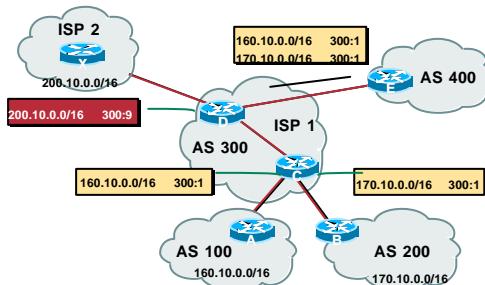

- Very useful in applying policies

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

22

## Community

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

23

## Well-Known Communities

- no-export

do not advertise to eBGP peers

- no-advertise

do not advertise to any peer

- local-AS

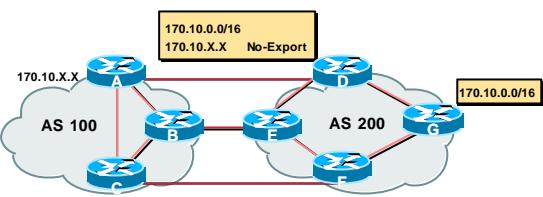

do not advertise outside local AS (only used with confederations)

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

24

## No-Export Community

- AS100 announces aggregate and subprefixes aim is to improve loadsharing by leaking subprefixes
- Subprefixes marked with **no-export** community
- Router G in AS200 does not announce prefixes with **no-export** community set

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

25

## BGP Path Selection Algorithm

Why is this the best path?

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

26

## BGP Path Selection Algorithm

- Do not consider path if no route to next hop
- Do not consider iBGP path if not synchronised
- Highest weight (local to router)
- Highest local preference (global within AS)
- Prefer locally originated route
- Shortest AS path

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

27

## BGP Path Selection Algorithm (continued)

- Lowest origin code  
IGP < EGP < incomplete
- Lowest Multi-Exit Discriminator (MED)  
If **bgp deterministic-med**, order the paths before comparing  
If **bgp always-compare-med**, then compare for all paths  
otherwise MED only considered if paths are from the same AS (default)

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

28

## BGP Path Selection Algorithm (continued)

- Prefer eBGP path over iBGP path
- Path with lowest IGP metric to next-hop
- For eBGP paths:  
If multipath is enabled, install N parallel paths in forwarding table  
If router-id is the same, go to next step  
If router-id is not the same, select the oldest path

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

29

## BGP Path Selection Algorithm (continued)

- Lowest router-id (originator-id for reflected routes)
- Shortest cluster-list  
Client **must** be aware of Route Reflector attributes!
- Lowest neighbour address

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

30

## Applying Policy with BGP

How to use the "tools"

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

31

## Applying Policy with BGP

- Policy-based on AS path, community or the prefix
- Rejecting/accepting selected routes
- Set attributes to influence path selection
- Tools:
  - Prefix-list (filters prefixes)
  - Filter-list (filters ASes)
  - Route-maps and communities

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

32

## Policy Control – Prefix List

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

33

- Per neighbour prefix filter  
incremental configuration
- High performance access-list
- Inbound or Outbound
- Based upon network numbers (using familiar IPv4 address/mask format)

## Prefix-list Command

[no] ip prefix-list <list-name> [seq <seq-value>] deny |  
permit <network>/<len> [ge <ge-value>] [le <le-value>]  
<network>/<len>: The prefix and its length  
ge <ge-value>: "greater than or equal to"  
le <le-value>: "less than or equal to"  
Both "ge" and "le" are optional. Used to specify the range of the prefix length to be matched for prefixes that are more specific than <network>/<len>

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

34

## Prefix Lists – Examples

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

35

- Deny default route  
`ip prefix-list EG deny 0.0.0.0/0`
- Permit the prefix 35.0.0.0/8  
`ip prefix-list EG permit 35.0.0.0/8`
- Deny the prefix 172.16.0.0/12  
`ip prefix-list EG deny 172.16.0.0/12`
- In 192/8 allow up to /24  
`ip prefix-list EG permit 192.0.0.0/8 le 24`  
This allows all prefix sizes in the 192.0.0.0/8 address block, apart from /25, /26, /27, /28, /29, /30, /31 and /32.

## Prefix Lists – Examples

- In 192/8 deny /25 and above  
`ip prefix-list EG deny 192.0.0.0/8 ge 25`  
This denies all prefix sizes /25, /26, /27, /28, /29, /30, /31 and /32 in the address block 192.0.0.0/8.  
It has the same effect as the previous example
- In 193/8 permit prefixes between /12 and /20  
`ip prefix-list EG permit 193.0.0.0/8 ge 12 le 20`  
This denies all prefix sizes /8, /9, /10, /11, /21, /22, ... and higher in the address block 193.0.0.0/8.
- Permit all prefixes  
`ip prefix-list EG permit 0.0.0.0/0 le 32`  
0.0.0.0 matches all possible addresses, "0 le 32" matches all possible prefix lengths

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

36

## Policy Control – Prefix List

- Example Configuration

```
router bgp 200
network 215.7.0.0
neighbor 220.200.1.1 remote-as 210
neighbor 220.200.1.1 prefix-list PEER-IN in
neighbor 220.200.1.1 prefix-list PEER-OUT out
!
ip prefix-list PEER-IN deny 218.10.0.0/16
ip prefix-list PEER-IN permit 0.0.0.0/0 le 32
ip prefix-list PEER-OUT permit 215.7.0.0/16
ip prefix-list PEER-OUT deny 0.0.0.0/0 le 32
```

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

37

## Policy Control – Filter List

- Filter routes based on AS path

- Inbound or Outbound

- Example Configuration:

```
router bgp 100
network 215.7.0.0
neighbor 220.200.1.1 filter-list 5 out
neighbor 220.200.1.1 filter-list 6 in
!
ip as-path access-list 5 permit ^200$
ip as-path access-list 6 permit ^150$
```

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

38

## Policy Control – Regular Expressions

- Like Unix regular expressions

- .
  - \*
  - +
  - ^
  - \$
  - 
  - |
  - ()
- Match one character
  - Match any number of preceding expression
  - Match at least one of preceding expression
  - Beginning of line
  - End of line
  - Beginning, end, white-space, brace
  - Or
  - brackets to contain expression

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

39

## Policy Control – Regular Expressions

- Simple Examples

- \*
  - +
  - ^\$
  - \_1800\$
  - \_1800\_
  - \_1800\_
  - \_790\_1800\_
  - \_1800\_+
  - \_\\(65530)\_
- match anything
  - match at least one character
  - match routes local to this AS
  - originated by AS1800
  - received from AS1800
  - via AS1800
  - via AS1800 and AS790
  - multiple AS1800 in sequence  
(used to match AS-PATH prepends)
  - via AS65530 (confederations)

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

40

## Policy Control – Regular Expressions

- Not so simple Examples

- ^[0-9]+\$
  - ^[0-9]+\_[0-9]+\$
  - ^[0-9]\*\_[0-9]+\$
  - ^[0-9]\*\_[0-9]\*\$
  - ^[0-9]+\_[0-9]+\_[0-9]+\$
  - \_701|1800\_
  - \_1849(\_+\_)12163\$
- Match AS\_PATH length of one
  - Match AS\_PATH length of two
  - Match AS\_PATH length of one or two
  - Match AS\_PATH length of one or two (will also match zero)
  - Match AS\_PATH length of three
  - Match anything which has gone through AS701 or AS1800
  - Match anything of origin AS12163 and passed through AS1849

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

41

## Policy Control – Route Maps

- A route-map is like a “programme” for IOS
- Has “line” numbers, like programmes
- Each line is a separate condition/action
- Concept is basically:
  - if *match* then do *expression* and *exit*
  - else
  - if *match* then do *expression* and *exit*
  - else etc

CiscoISPWorkshops © 2003, Cisco Systems, Inc. All rights reserved.

42

## Route Maps – Caveats

- Lines can have multiple set statements but only one match statement
- Line with only a set statement all prefixes are matched and set any following lines are ignored
- Line with a match/set statement and no following lines only prefixes matching go through the rest are dropped

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

43

## Route Maps – Caveats

- Example

omitting the third line below means that prefixes not matching **list-one** or **list-two** are dropped

```
route-map sample permit 10
match ip address prefix-list list-one
set local-preference 120
!
route-map sample permit 20
match ip address prefix-list list-two
set local-preference 80
!
route-map sample permit 30 ! Don't forget this
```

CiscoISPWorkshop

© 2003, Cisco Systems, Inc. All rights reserved.

44

## Policy Control – Route Maps

- Example Configuration – route map and prefix-lists

```
router bgp 100
neighbor 1.1.1.1 route-map infilter in
!
route-map infilter permit 10
match ip address prefix-list HIGH-PREF
set local-preference 120
!
route-map infilter permit 20
match ip address prefix-list LOW-PREF
set local-preference 80
!
ip prefix-list HIGH-PREF permit 10.0.0.0/8
ip prefix-list LOW-PREF permit 20.0.0.0/8
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

45

## Policy Control – Route Maps

- Example Configuration – route map and filter lists

```
router bgp 100
neighbor 220.200.1.2 remote-as 200
neighbor 220.200.1.2 route-map filter-on-as-path in
!
route-map filter-on-as-path permit 10
match as-path 1
set local-preference 80
!
route-map filter-on-as-path permit 20
match as-path 2
set local-preference 200
!
ip as-path access-list 1 permit _150$
ip as-path access-list 2 permit _210_
```

CiscoISPWorkshop

© 2003, Cisco Systems, Inc. All rights reserved.

46

## Policy Control – Route Maps

- Example configuration of AS-PATH prepend
- ```
router bgp 300
network 215.7.0.0
neighbor 2.2.2.2 remote-as 100
neighbor 2.2.2.2 route-map SETPATH out
!
route-map SETPATH permit 10
set as-path prepend 300 300
```
- Use your own AS number when prepending Otherwise BGP loop detection may cause disconnects

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

47

## Policy Control – Route Maps

- Route Map MATCH Articles

|                   |                 |
|-------------------|-----------------|
| as-path           | ip next-hop     |
| c1ns address      | ip route-source |
| c1ns next-hop     | length          |
| c1ns route-source | metric          |
| community         | n1ri            |
| interface         | route-type      |
| ip address        | tag             |

CiscoISPWorkshop

© 2003, Cisco Systems, Inc. All rights reserved.

48

## Policy Control – Route Maps

- Route map SET Articles

|               |                     |
|---------------|---------------------|
| as-path       | dampening           |
| automatic-tag | default interface   |
| cIns          | interface           |
| comm-list     | ip default next-hop |
| community     | ip next-hop         |

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

49

## Policy Control – Route Maps

- Route map SET Articles

|                  |                |
|------------------|----------------|
| ip precedence    | next-hop       |
| ip qos-group     | nlri multicast |
| ip tos           | nlri unicast   |
| level            | origin         |
| local preference | tag            |
| metric           | traffic-index  |
| metric-type      | weight         |

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

50

## Policy Control – Matching Communities

- Example Configuration

```
router bgp 100
neighbor 220.200.1.2 remote-as 200
neighbor 220.200.1.2 route-map filter-on-community in
!
route-map filter-on-community permit 10
match community 1
set local-preference 50
!
route-map filter-on-community permit 20
match community 2 exact-match
set local-preference 200
!
ip community-list 1 permit 150:3 200:5
ip community-list 2 permit 88:6
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

51

## Policy Control – Setting Communities

- Example Configuration

```
router bgp 100
network 215.7.0.0
neighbor 220.200.1.1 remote-as 200
neighbor 220.200.1.1 send-community
neighbor 220.200.1.1 route-map set-community out
!
route-map set-community permit 10
match ip address prefix-list NO-ANNOUNCE
set community no-export
!
route-map set-community permit 20
match ip address prefix-list EVERYTHING
!
ip prefix-list NO-ANNOUNCE permit 172.168.0.0/16 ge 17
ip prefix-list EVERYTHING permit 0.0.0.0/0 le 32
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

52

## Aggregation Policies

- Suppress Map

Used to suppress selected more-specific prefixes (e.g. defined through a route-map) in the absence of the **summary-only** keyword.

- Unsuppress Map

Used to unsuppress selected more-specific prefixes per BGP peering when the **summary-only** keyword is in use.

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

53

## Aggregation Policies – Suppress Map

- Example

```
router bgp 100
network 220.10.10.0
network 220.10.11.0
network 220.10.12.0
network 220.10.33.0
network 220.10.34.0
aggregate-address 220.10.0.0 255.255.0.0 suppress-map block-net
neighbor 222.5.7.2 remote-as 200
!
route-map block-net permit 10
match ip address prefix-list SUPPRESS
!
ip prefix-list SUPPRESS permit 220.10.8.0/21 le 32
ip prefix-list SUPPRESS deny 0.0.0.0/0 le 32
!
```

CiscoISPWorkshops

© 2003, Cisco Systems, Inc. All rights reserved.

54

## Aggregation Policies – Suppress Map

- show ip bgp on the local router

```
router1#sh ip bgp
BGP table version is 11, local router ID is 222.5.7.1
Status codes: s suppressed, d damped, h history, * valid, > best, i - internal
Origin codes: i - IGP, e - EGP, ? - incomplete
Network          Next Hop      Metric LocPrf Weight Path
* 220.10.0.0/16  0.0.0.0            32768 i
> 220.10.10.0   0.0.0.0           0       32768 i
> 220.10.11.0   0.0.0.0           0       32768 i
> 220.10.12.0   0.0.0.0           0       32768 i
*> 220.10.33.0   0.0.0.0           0       32768 i
*> 220.10.34.0   0.0.0.0           0       32768 i
```

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

55

## Aggregation Policies – Suppress Map

- show ip bgp on the remote router

```
router2#sh ip bgp
BGP table version is 90, local router ID is 222.5.7.2
Status codes: s suppressed, d damped, h history, * valid, > best, i - internal
Origin codes: i - IGP, e - EGP, ? - incomplete
Network          Next Hop      Metric LocPrf Weight Path
* 220.10.0.0/16  222.5.7.1            0       100 i
*> 220.10.33.0   222.5.7.1           0       100 i
*> 220.10.34.0   222.5.7.1           0       100 i
```

CiscoISPWorkshops © 2003 Cisco Systems, Inc. All rights reserved.

56

## Aggregation Policies – Unsuppress Map

- Example

```
router bgp 100
network 220.10.10.0
network 220.10.11.0
network 220.10.12.0
network 220.10.33.0
network 220.10.34.0
aggregate-address 220.10.0.0 255.255.0.0 summary-only
neighbor 222.5.7.2 remote-as 200
